

## Definition of Done

This document contains information about DoD for group number 13 during the development of the MyBar Android application.

This document, and the checklist, is auditable during the project but the goal is that all the tasks should be completed before the hand in date.

When compiling the DoD task list we have used our personal ideas about the product and the criteria list supplied by the course leader.

## Checklist:

- Have a good code base
- Used GIT-hub in a good way
- The GUI should have a nice look and feel good
- Comment all code what need some sort of clarification or explaining
- Use Unit testing to rest all the code
- Test external code that the application is dependent on
- Documented the functions in the application
- Write and spellchecked all the hand ins
- Written a License agreement to the application
- Choose a license for the code
- Have a updated UML-diagram
- "Closed" the GIT-hub and copied the code to own server
- Have tested written good PHP code so the database server is secure
- Publish the application to Google Play
- Have had a release party
